Student Threat/Behavioral Assessment

Threat Assessment has been referred to as the **“missing link”** in violence prevention. It is the process of deliberately **trying to connect the dots** or **data** that paints the picture that someone is moving on a pathway towards serious violence **before the violent act occurs**.

Reporting safety risks is key for preventing future incidents and learning more about threats to schools

More states are taking action to report students that make a threat and identify their pattern of behavior that makes them a potential threat to themselves or others.

> ***“A multidisciplinary threat assessment team, in conjunction with the appropriate policies, tools, and training, is the best practice for preventing future tragedies.”***

Protecting America’s schools/analysis of targeted school violence/2019. United States Secret Service. NTAC.

Challenges on Assessment Process

FAILURE to share teacher observations

This can be a missed opportunity due to a lack of a reporting tool to share threat information.

FAILURE to share safety risk info stating privacy laws

This calls for a safe and secure system to communicate student threat assessment information.

FAILURE to train admin and staff on Threat Assessment Process

Staff and administrators change frequently, an electronic system guides new team members and increases success for new members.

FAILURE to current transfer cases to new threat assessment team

Calls for a case management system where the student safety assessment records travel from building to building in the district automatically.

Student Threat Assessment Manager

SIMPLIFY behavioral threat assessments by case management software.

SUPPORT all threat assessment models or create your own forms.

AUTOMATE case transfers to new buildings when students change buildings

COMMUNICATE & COLLABORATE while working together to help students get off the pathway to violence.

INTEGRATE with school student information system and threat report systems.
