CONTROLS & CONNECTORS (16 Key)

LED INDICATOR	LTR	CONVENTIONAL
Glows Green	System Busy	Monitor on
Blinking Green	—	Busy Channel (or SQL off)
Glows Red	Transmitting	Transmitting
Blinking Red	Battery Voltage is low	Battery Voltage is low
Yellow	Receiving a Selective Call	Receiving a Selective Call

CONTROLS & CONNECTORS (4 Key)

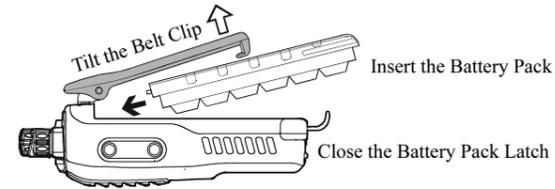

LED INDICATOR	LTR	CONVENTIONAL
Glows Green	System Busy	Monitor on
Blinking Green	—	Busy Channel (or SQL off)
Glows Red	Transmitting	Transmitting
Blinking Red	Battery Voltage is low	Battery Voltage is low
Yellow	Receiving a Selective Call	Receiving a Selective Call

BEFORE YOU BEGIN

Battery Pack Installation and Removal

- To install the battery, hold the transceiver with your left hand, so your palm is over the speaker and your thumb is on the top of the belt clip. Insert the battery pack into the battery compartment on the back of the radio while tilting the Belt Clip outward, then close the Battery Pack Latch until it locks in place with a "Click."

- To remove the battery, turn the radio off and remove any protective cases. Open the Battery Pack latch on the bottom of the radio, then slide the battery downward and out from the radio while holding the Belt Clip.

Caution!
Do not attempt to open any of the rechargeable Ni-Cd packs, as they could explode if accidentally short-circuited.

Low Battery Indication

- As the battery discharges during use, the voltage gradually becomes lower. When the battery voltage becomes to low, substitute a freshly charged battery and recharge the depleted pack. The TX/BUSY indicator on the top of the radio will blink **red** when the battery voltage is low.
- Avoid recharging Ni-Cd batteries often with little use between charges, as this can degrade the charge capacity. We recommend that you carry an extra, fully-charged pack with you so the operational battery may be used until depletion (this "deep cycling" technique promotes better long-term battery capacity).

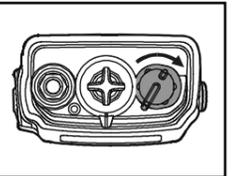

OPERATION

Preliminary Steps

- Install a charged battery pack onto the transceiver, as described previously.
- Screw the supplied antenna onto the Antenna jack. Never attempt to operate this transceiver without an antenna connected.
- If you have a Speaker/Microphone, we recommend that it not be connected until you are familiar with the basic operation of the VX-420A Series (LTR).

Operation Quick Start

- Turn the top panel's VOL/PWR knob clockwise to turn on the radio on.

- Turn the top panel's System/Group selector knob to choose the desired operating channel.

- Rotate the VOL/PWR knob to set the volume level. If no signal is present, press and hold in the Programmable key assigned to "NSQL" for more than one second; background noise will now be heard, and you may use this to set the VOL/PWR knob for the desired audio level.

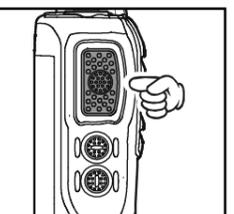

- Press and hold in the Programmable key assigned to "NSQL" for more than one second (or press the NSQL key twice) to quiet the noise and resume normal (quiet) monitoring.

- To transmit, monitor the channel and make sure it is clear.

THIS IS AN FCC REQUIREMENT!

- To transmit, press and hold in the PTT switch. Speak into the microphone area of the front panel grille (lower left-hand corner) in a normal voice level. To return to the Receive mode, release the PTT switch.

- If a Speaker/Microphone is available, remove the plastic cap and its two mounting screws from the right side of the transceiver, then insert the plug from the Speaker/Microphone into the MIC/SP jack; secure the plug using the screws supplied with the Speaker/Microphone. Hold the speaker grille up next to your ear while receiving. To transmit, press the PTT switch on the Speaker/Microphone, just as you would on the main transceiver's body.
Note: Save the original plastic cap and its mounting screws. They should be re-installed when not using the Speaker/Microphone.

SAFETY TRAINING INFORMATION

This Radio has been tested and complies with the Federal Communications Commission (FCC) RF exposure limits for Occupational Use/Controlled exposure environment. In addition, it complies with the following Standards and Guidelines:

- FCC 96-326, Guidelines for Evaluating the Environmental Effects of Radio-Frequency Radiation.
- FCC OET Bulletin 65 Edition 97-01 (1997) Supplement C, Evaluating Compliance with FCC Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields.
- ANSI/IEEE C95.1-1992, IEEE Standard for Safety Levels with Respect to Human Exposure to Radio Frequency Electromagnetic Fields, 3kHz to 300 GHz.
- ANSI/IEEE C95.3-1992, IEEE Recommended Practice for the Measurement of Potentially Hazardous Electromagnetic Fields-RF and Microwave.

WARNING: This radio generates RF electromagnetic energy during transmit mode. This radio is designed for and classified as **Occupational Use Only**, meaning it must be used only during the course of employment by individuals aware of the hazards, and the ways to minimize such hazards. This radio is not intended for use by the **General Population** in an uncontrolled environment.

CAUTION: To ensure that your exposure to RF electromagnetic energy is within the FCC allowable limits for occupational use, always adhere to the following guidelines:

- This radio is **NOT** approved for use by the general population in an uncontrolled environment. This radio is restricted to occupational use, work related operations only where the radio operator must have the knowledge to control its RF exposure conditions.
- When transmitting, hold the radio in a vertical position with its microphone 1 to 2 inches (2.5 to 5 cm) away from your mouth and keep the antenna at least 1 inch (2.5cm) away from your head and body.

- The radio must be used with a maximum operating duty cycle not exceeding 50 %, in typical Push-to-Talk (PTT) configurations. **DO NOT** transmit for more than 50 % of total radio use time (50 % duty cycle). Transmitting more than 50 % of the time can cause FCC RF exposure compliance requirements to be exceeded.

The radio is transmitting when the red LED on the top of the radio is illuminated. You can cause the radio to transmit by pressing the PTT button or by using the VOX headset, model VC-25.

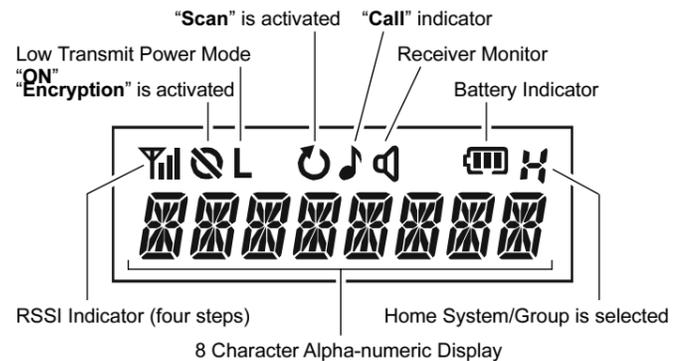

- DO NOT** transmit when the radio is used in Body Worn configuration with the following accessory: belt-clip. It must be used **ONLY** for (1) there is a 4 cm distance from the body during transmitting, (2) monitoring purposes, using the speaker only and (3) for carrying purposes.
- Always use Vertex Standard authorized accessories.

The information listed above provides the user with the information needed to make him or her aware of RF exposure, and what to do to assure that this radio operates with the FCC RF exposure limits of this radio.

Electromagnetic Interference/Compatibility
During transmissions, this radio generates RF energy that can possibly cause interference with other devices or systems. To avoid such interference, turn off the radio in areas where signs are posted to do so. Do not operate the transmitter in areas that are sensitive to electromagnetic radiation such as hospitals, health care facilities, aircraft, and blasting sites.

FCC LICENSE INFORMATION
This radio operates on communications frequencies which are subject to FCC (Federal Communications Commission) Rules and Regulations. FCC Rules require that all operators using Private Land Mobile radio frequencies obtain a radio license before operating their equipment.

DISPLAY ICONS & INDICATORS

Notice !

There are no owner-serviceable parts inside the transceiver. All service jobs must be referred to an authorized VERTEX STANDARD Service Representative. Consult your Authorized VERTEX STANDARD Dealer for installation of optional accessories.

This device complies with Part 15 of the FCC rules. Operation is subject to the condition that this device does not cause harmful interference.

Trunking System

- Press the PTT switch.
- When a channel is available, the TX/BUSY indicator will glow red. The radio is now transmitting. While holding the PTT switch, speak into the microphone area of the front panel grille (lower left-hand corner) in a normal voice level.
- If all channels are busy, a continuous tone will be heard from the speaker, and the "BUSY" notation will appear on the display when the PTT switch is pressed. Release the PTT switch.
- If the radio is out of range during the transmitting attempt, slow beeps will be heard followed by a continuous tone from the speaker.

KEY FUNCTIONS

The **VX-420A Series (LTR)** provides programmable [A], [B], [C], [D] function keys and programmable [Side 1] and [Side 2] switches. These “**Programmable**” keys functions can be customized (set to other functions), via programming by your **VERTEX STANDARD** dealer, to meet your communications/network requirements. Some features may require the purchase and installation of optional internal accessories. The possible **Programmable** key programming features are illustrated below, and their functions are explained in the next chapter. For further details, contact your **VERTEX STANDARD** dealer. For future reference, check the box next to each function that has been assigned to the **Programmable** key on your particular radio, and keep it handy.

Function	Programmable key (Press/Press and Hold)

DESCRIPTION OF OPERATING FUNCTIONS

System Up, Down

Press (or Press and hold) the assigned **Programmable** key to switch to a higher (or lower) System.

Once the desired System is reached, rotate the **System/Group** knob to select the desired System/Group within the selected System.

Group Up, Down

Press (or Press and hold) the assigned **Programmable** key to switch to a higher (or lower) operating Group number.

Monitor

Press (or Press and hold) the assigned **Programmable** key to disable the Signaling Squelch (CTCSS, DCS, 5-Tone Signaling, or DTMF Pager). Again press (or Press and hold) the assigned **Programmable** key to resume normal (quiet) the Signaling Squelch action.

When the Signaling Squelch is disabled, the “**🔇**” icon will be indicated on the display.

NSQ

Press and hold the assigned **Programmable** key to disable both the Noise and Signaling Squelch (CTCSS, DCS, 5-Tone Signaling, or DTMF Pager) systems. Again press and hold the assigned **Programmable** key to resume normal (quiet) operation of the Noise and Signaling Squelch system.

When the Signaling Squelch is disabled, the “**🔇**” icon will be indicated on the display.

TX Low Power

Press (or Press and hold) the assigned **Programmable** key to set the radio’s transmitter to the “Low Power” mode, thus extending battery life. Press (or Press and hold) the assigned **Programmable** key again to return to “High Power” operation when in difficult terrain.

When the radio’s transmitter is set to “Low Power” mode, the “**L**” icon will be indicated on the display.

Key Lock

Press (or Press and hold) the assigned **Programmable** key to lock the **Programmable** keys (except *Lock*, *Emergency*, *Monitor*, *Lighting*, and *NSQ* keys); thus, the [A], [B], [C], and [D] keys can be disabled to prevent radio settings from being disturbed. In the Lock mode, the display will show “**LOCK**” when you rotate the **System/Group** selector knob or touch a **Programmable** key.

Lighting

Press (or Press and hold) the assigned **Programmable** key to illuminate the LCD for five seconds.

Scan

The Scanning feature is used to monitor multiple channels programmed into the transceiver. While scanning, the radio will check each channel for the presence of a signal, and will stop on a channel if a signal is present.

To activate scanning:

Press (or Press and hold) the assigned **Programmable** key.

The scanner will search the channels, looking for active ones; it will pause each time it finds a channel on which someone is speaking.

To stop scanning:

Press (or Press and hold) the assigned **Programmable** key.

Operation will revert to the channel to which the **System/Group** knob is set.

Talk Around

Press (or Press and hold) the assigned **Programmable** key to activate the Talk Around feature when you are operating on duplex channel systems (separate receive and transmit frequencies, utilizing a “repeater” station). The Talk Around feature allows you to bypass the repeater station and talk directly to a station that is nearby. This feature has no effect when you are operating on “Simplex” channels, where the receive and transmit frequencies are already the same.

When the “TA” function is activated, the “**TA ON**” notation will be appeared on the display.

Note that your dealer may have made provision for “Talk Around” channels by programming “repeater” and “Talk Around” frequencies on two adjacent channels. If so, the key may be used for one of the other Pre-Programmed Functions.

Scan A/D

The Add/Del feature allows the user to arrange a custom Scan.

Press (or Press and hold) the assigned **Programmable** key to delete/restore the current channel to/from your scanning list.

When you delete a stored channel, the “**🗑**” icon will, in turn disappear. When you restore a channel, the “**🗑**” icon will now appear.

Phone

Your Dealer may have pre-programmed Auto-Dial telephone number memories into your radio.

To dial a number, just press (or Press and hold) the Dealer-assigned **Programmable** key for Speed Dialing. The DTMF tones sent during the dialing sequence will be heard in the speaker.

Call/Reset

Press (or Press and hold) the assigned **Programmable** key to silence the receiver and reset for another call (when your communication is finished).

Call 1/Call 2

Press (or Press and hold) the assigned **Programmable** key to send a 5-tone sequential tone group which is pre-defined.

Call Up/Call Down

Press (or Press and hold) the assigned **Programmable** key to select a 5-tone encode code from the pre-defined encode list.

Code Set

Press (or Press and hold) the assigned **Programmable** key to change the encode digits for 5-tone operation. To change a specific digit, select the desired digit using the [A] key, then change the number using the [B]/[C] keys, and store the number using the [D] key.

Emergency

The **VX-420A Series (LTR)** includes an “Emergency” feature, which may be useful, if you have someone monitoring on the same frequency as your transceiver’s channel. For further details contact your **VERTEX STANDARD** dealer.

Home

Press (or Press and hold) the assigned **Programmable** key to recall the pre-programmed Home system/group. When you recall the Home system/group, the “**H**” icon will appear on the display.

Press (or Press and hold) the assigned **Programmable** key again to return to previous system/group; the “**H**” icon will disappear on the display.

Home Set

Press (or Press and hold) the assigned **Programmable** key to store the current system/group to the Home register.

Short-cut GP-1, GP-2, GP-3, GP-4

Press (or Press and hold) the assigned **Programmable** key to recall the Dealer pre-programmed System/Group directly.

Continuous System Up, Down

Press and hold the assigned **Programmable** key causes the radio to begin stepping (repeatedly) upward or downward through the Systems.

Continuous Group Up, Down

Press and hold the assigned **Programmable** key causes the radio to begin stepping (repeatedly) upward or downward through the Groups.

ARTS (AUTO RANGE TRANSPOND SYSTEM)

This system is designed to inform you when you and another **ARTS**-equipped station are within communication range.

During **ARTS** operation, your radio automatically transmits for about 1 second every 25 or 55 seconds in an attempt to shake hands with the other station.

If you have out of range for more than two minutes, your radio senses that no signal has been received, a ringing beeper will sound, and “**GROU OUT**” will appear on the LCD. If you subsequently move back into range, as soon as the other station transmits, your beeper will sound and “**GROU IN**” will appear on the LCD.

DTMF PAGING SYSTEM (REQUIRES FVP-25 OPTIONAL BOARD)

This system allows paging and selective calling, using DTMF tone sequences.

When your radio is paged by a station bearing a tone sequence which matches yours, your radio’s squelch will open and the alert will sound. The three-digit code of the station which paged you will be displayed on your radio’s LCD.

ACCESSORIES & OPTIONS

FNB-V57	7.2 V 1100 mAh Ni-Cd Battery
FNB-V57IS	Intrinsically-Safe 7.2 V 1100 mAh Ni-Cd Battery
